

## FESPA 2018, BERLIN

15th - 18th May 2018

Once again FESPA returns to Berlin, Folex is proud to present its wide media assortment for large format ink jet printers. The range continues to expand, offering customers high quality, consistent and reliable European produced materials, with coatings suitable for all the current ink jet printing technologies such as latex, solvent, aqueous and UV inks.

### HIGHLIGHTS

On the Folex booth (Hall 3.2, Stand D20) the company will premier new materials in the fields of easy application window graphics and rollup films with high glossy nanoporous finishes.

WOWTack S CL (patent pending) is a PET super clear, dry apply, very easy application window film that means it does not need to be applied by professional fitters. The unique, grip layer, ensures it stays in place on glass surfaces with no bubbles and can be printed using solvent, latex and UV inks.

SI 161 is a glossy nanoporous, instant drying and water resistant rollup film offering stunning impact and contrast to your images. The reverse side uses its silverback block out technology, suitable for water based inks.

Also on show will be our growing family of sign and display films including backlit, rollup, popup, adhesives, canvas and fine art papers.

Finally in the area of colour separation: the 'ReproJet' series for pigment and eco-solvent inks offers the necessary resolution and high density for the most demanding screen, flexo and pad applications and here the range is today the most extensive in the industry. On offer are a wide variety of product performances and price points to satisfy all spectrums of the market.

We look forward to welcoming you to our booth.
