

LOPEC 2025 - PREVIEW

LOPEC exhibition: 26. and 27. February 2025 | Hall B0 | Stand 217

Foxex will be presenting film products for use in the area of printed electronics

Cologne, 28.01.2025

Printed electronics and organic, printed electronics in particular, require protection in most applications, especially at the interface to the user of the device. The wide Folex product range is the perfect solution offering excellent mechanical protection, protection from UV light and also from chemicals used when handling and cleaning. At LOPEC 2025 in Munich, Folex will be presenting its range of films for such applications. With the ESSENTIALS in the range of Films for Input Systems, the company group will also be showcasing functional films with different surfaces; all of them now come with UV protection as standard and are available in widths of up to 122 cm.

Figure: Printed Folex-Film

Folex also offers the possibility of equipping products with additional properties. Samples will be shown, for example, with optically clear adhesive and substrates with conductive surfaces. Folex presents various interesting prototypes and products that can be used for mobility and smart living applications, for instance.

ABOUT FOLEX

The Folex group specialises in the finishing and coating of films and specialties and has production companies based in Switzerland (Schwyz) and Germany (Cologne and Erlangen) that offer high-quality products and tailor made services for a wide variety of markets. Today Folex offers solutions for many sectors, from the printing industry or digital and large format printing, the office and home sector, all the way to primary products for the electronics industry.
